

# Redefining Precision Medicine

Fitango Oncology™ is an end-to-end oncology decision support, care management and patient engagement platform focused on improving outcomes in a value-based environment

The Fitango Oncology™ platform fuels precision medicine for clinicians to deliver the best possible patient care. By utilizing the innovative clinical decision-support technology, clinicians can create custom, evidence-based regimens, treatment plans and curate quality processes for all stakeholders.

The interdisciplinary platform brings together the patient, their family and care team on one holistic platform to ensure patients are informed and involved throughout their cancer journey\*.

## Fitango Health Supports Your Clinical Decision-Making

Oncology centers and healthcare facilities can now use the Fitango Oncology™ platform and utilize the Pathways technology to create custom treatment plans for providers and patients. Clinicians can also create clinical trials from inception with all the tools needed to track, manage, and analyze data with the platform.

Oncologists can create custom oncology pathways based on their own process or on the requirements of the rare cases they may encounter. Oncologists can also:

- ◇ Select from evidence-based care guidelines (such as NCCN, ASCO, ESMO, or their own) and create custom care plans
- ◇ Develop a protocol for rare and novel patient cases
- ◇ Streamline and standardize triage care coordination

By building and prescribing custom treatment plans, the relationship with the patient is both active and engaged. And with our end-to-end engagement for all involved stakeholders, the application can be a true companion for the entire cancer journey\*.

# Precision Medicine Applied with Fitango Oncology™

Our precision medicine oncology platform aggregates and centralizes the relevant genetic, treatment regimens, recommendations, patient education and survivorship information integrated with EHR/EMR clinical patient data for efficient delivery of precise, value-based patient care.

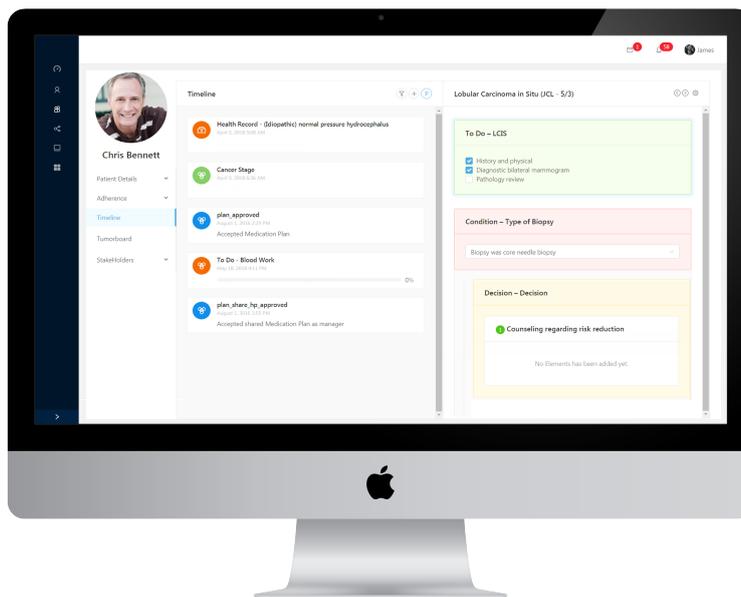

- ◇ **Molecular Tumor Boards (MTB)** - Streamline the MTB process layering in automated personalized treatment regimens that are flexible for commentary and necessary adaptations, aiding in the documentation process for pre-authorizations, should a patient require off-pathway care
- ◇ **Genetic Information** - Gain access into genomic libraries to research, compare, learn and apply findings
- ◇ **Clinical Trials** - Access relevant clinical trials within the Fitango Oncology™ platform to efficiently encourage enrollment for appropriate patients
- ◇ **Regimen Resources** - Utilize up-to-date comprehensive resources spanning treatment pathways, clinical guidelines, patient education and patient care

## Coordinate and Manage Your Care

The Fitango Oncology™ platform assists with care and task management interwoven into a process creating a communication hub for all stakeholders involved in the patient's ecosystem. The platform also provides an all-in-one interactive repository of oncology information, where physicians are able to determine the best treatment plan for the patient and enhance overall engagement.

While using the platform, Care Managers are able to:

- ◇ Receive real-time clinical alerts when patients report health data that is defined to be out of a safe range
- ◇ Invite all relevant stakeholders to join the team regardless of institution or function
- ◇ Create custom Care Plans either on the platform or by importing templates
- ◇ Assign custom Care Plans directly to the patient or an external provider and understand the changing health of your patient population
- ◇ Keep track of all encounters and communication between you and your patients on the timeline

The Timeline & Pathways

## Empowering Patients and Their Families

Give your patients and their families the tools needed to track their progress while receiving important education on their condition and treatment.

The Fitango Oncology™ platform empowers not only the patients, but also their families. To satisfy this, the platform provides:

- ◇ **Family Dashboard** - Enable family members to be connected with the system to view and report on the patient's care plans
- ◇ **Medication Management** - Manage the patients medications and supplements
- ◇ **Biometric Trackers** - Customize and track 200+ trackers with connection to any Bluetooth wearable device
- ◇ **Health Education** - Access resources that focus on health, safety, and other important information
- ◇ **Patient Alerts** - Alert the care team about events and set reminders for scheduled activities
- ◇ **ActionPlans** - Build, publish, and prescribe custom ActionPlans to patients and/or their family members to report, stay engaged, and be monitored by their care team

### Platform Key Facts

- ✓ Secure and HIPAA-compliant
- ✓ Highly integrated platform
- ✓ Cloud-based, web and mobile accessible
- ✓ White-label and customizable
- ✓ Includes telemedicine and remote-patient monitoring
- ✓ Open architecture with complete API
- ✓ Embedded EMR interoperability using InterSystems' HealthShare Connect\*

\*HealthShare Connect is a product of  InterSystems®
